Expansion areas

Service	After sales	Delivery	Discovery	Retention and control
Tickets and SLA	Returns, exchanges and refunds	NDR and RTO	Reviews, search and GSM finder	Store credit, referrals and exceptions

01 PURPOSE AND SCALE

New capabilities beyond the original ecommerce baseline

This addendum expands selected operational and customer-experience areas identified after the original scope was shared. It does not replace, reduce or re-price the original proposal, and it does not repeat baseline functionality as a new deliverable.

67 to 82 CUSTOMER SCREENS	44+ to 73+ ADMIN VIEWS	111+ to 155+ COMBINED VIEWS	+44 NEW DESTINATIONS
---	--	---	--

Area	Original baseline	Expansion in this addendum
Bulk purchasing	Bulk / Wholesale Enquiry page is already in baseline	Confirm quote-only or online bulk order, MOQ and tiered terms; no duplicate page count
Support	Ticket destination and support role	Service desk, ownership, SLA, conversations, escalation and analytics
Client showcase	No dedicated destination in original page list	One new Clients We Work With page using approved client names, logos and references
After sales	Return, pickup, inspection and refund/replacement	Policy rules, exchanges, COD refunds, store credit and approval levels
Delivery	Tracking, NDR status and RTO reporting	NDR action queue, customer response, RTO risk rules and cost control
Trust and discovery	Reviews, search and filters	Moderation, Q&A, merchandising, comparison and guided GSM selection
Retention	Reorder, cohorts and reminders	Back-in-stock, store credit, referral and stronger communication controls
Governance	Roles, logs, backups and integrations	Exception queues, high-risk approvals, privacy requests and sessions

Counting method. Counts represent major destinations and workflows. Tabs, modals, empty states, errors, permissions and light/dark responsive states are not separately counted.

02 SERVICE AND AFTER SALES

Support, returns and refunds become connected operations

The customer sees a clear case history. Kleawip staff receive ownership, policy control, approval steps and measurable resolution workflows connected to the relevant order, payment, shipment and item.

Customer support and service desk	Advanced returns, exchanges and refunds
Support centre and guided issue selection My Tickets list and ticket conversation Order, payment, shipment, return or product linkage Validated attachments and customer-visible status Agent/team assignment and ownership history Priority, first-response and resolution SLA Internal notes, reply templates and escalation Workload, ageing, reopen and satisfaction reports	Eligibility by product, delivery date, reason and condition Item-level return, replacement, exchange or partial refund RMA reference, evidence and structured reason codes Reverse pickup, AWB and pickup exception handling Warehouse QC and stock disposition Online refund status and reconciliation Controlled COD refund details and approval Store credit or coupon compensation where approved Return, refund and product-quality reporting

AI assisted support with human approval

- Summarise long ticket threads and highlight the unresolved issue.
 - Suggest category, priority and an editable response using approved Kleawip knowledge.
- Keep private order and customer data permission-based and logged.
 - Require authorised staff approval for every refund, cancellation, replacement and account change.

Financial control. Refund initiation, provider acknowledgement, final processing and reconciliation remain separate states so staff never mark a refund complete from an uncertain response.

03 DELIVERY AND TRUST

NDR, RTO, verified reviews and product questions

Courier failures and customer feedback become actionable records instead of isolated provider-dashboard entries, chat messages or unverified website content.

NDR and RTO control centre

Workflow	Expanded control	Outcome
NDR intake	Reason, courier status, owner, response deadline and next action	One queue across shipments
Customer response	Secure confirmation of address, date, reattempt or cancellation where supported	Faster recovery
RTO risk	Rules using pincode, order value, history and prior RTO	Prepaid or partial-COD control
Reconciliation	Forward/return freight, advance, COD due and remittance	True failed-order cost

Verified reviews and product questions

Capability	Customer experience	Administration control
Reviews	Rating, text and optional photo/video after delivery	Verified-purchase link, moderation and history
Merchant reply	Visible Kleawip response	Authorised reply and edit history
Product Q&A	Ask and browse product/use questions	Assignment, answer, approval and publishing
Trust protection	Report inappropriate content	Spam signals, rights checks and auditable decision

Control boundary. Only genuine approved feedback contributes to displayed ratings. Automated courier actions remain dependent on the selected provider's API and account capabilities.

04 DISCOVERY AND RETENTION

Help customers choose correctly and return for useful reasons

The expansion improves how shoppers find a suitable product and how Kleawip follows up after genuine interest or purchase, subject to approved consent and communication rules.

Advanced search and guided selection

Capability	Experience	Client control
Search language	Typo tolerance, normalization and synonyms	Approved terms and priorities
Merchandising	Relevant promoted items without hiding stronger matches	Rules by query, category, stock and period
Zero results	Alternative terms, categories and products	Zero-result query report
Comparison	Side-by-side GSM, size, weave, use, absorbency and care	Comparable fields and eligible products
GSM finder	Guided questions about surface, drying need and size	Questions, rules and recommendations

Bulk purchase and wholesale enquiry

The original 67-page scope already includes a Bulk / Wholesale Enquiry page. The enhancement defines its business workflow: product and variant interest, estimated quantity, business contact, delivery location, requested timeline and enquiry follow-up. Whether Kleawip needs quote-only enquiries or a separate bulk checkout with MOQ and tiered pricing must be confirmed in Phase 0; this page is not counted twice.

Retention and account value

Feature	Customer value	Safeguard
Back in stock	Subscribe to an unavailable variant	Frequency cap and unsubscribe
Abandoned cart	Secure return to the saved cart	Delay, exclusions and consent
Store credit	Use an approved account balance	Immutable ledger, expiry and permissions
Referral centre	Share referral and view rewards	Qualification, fraud and reversal rules
Segments	More relevant offers and messages	Consent, exclusion and export controls

05 COMMUNICATION AND RELIABILITY

Every failed or uncertain operation receives a safe next action

The baseline notification system is extended with administrative control and central exception handling for payments, refunds, shipments, inventory and messages.

Notification operations

- Editable approved templates with safe variables and preview data.
 - Version history, publishing approval and rollback.
 - Delivery logs by order, customer, channel, event and provider status.
- Automatic retries with duplicate-send protection.
 - Authorised replay with reason and audit history.
 - Preference-centre and channel unsubscribe handling where applicable.

Operations exception queue

Area	Failures made visible	Resolution record
Payment	Late success, duplicate callback, signature or amount mismatch	Verification and order decision
Refund	Pending, failed, processed or reconciliation mismatch	Reference, provider status and approval
Shipping	AWB, pickup, tracking or cancellation failure	Response, retry and manual action
Inventory	Reservation expiry or adjustment conflict	Ledger movement and resulting balance
Notification	Rejected, bounced, delayed or unavailable	Template, status, retry and replay

High-risk actions. Manual refunds, store-credit issues, stock write-offs and bulk rewards use maker-checker approval and a permanent audit entry.

06 PRIVACY AND SCOPE SEPARATION

Stronger customer-data workflows without mixing service categories

The expansion adds practical controls for customer requests and staff access. Search, analytics and AI-visibility execution remain separate professional services and are not bundled into this feature addendum.

Privacy and staff access

Area	Added workflow	Safeguard
Privacy requests	Account-data export or deletion-review request	Identity, retention and approval checks
Sessions	View/revoke sessions where enabled	Device history and forced sign-out
Suspicious access	Security notification after defined events	Rate limit, lockout and investigation trail
Attachments	Allowed support/return evidence	Type/size validation, access and retention
Exports	Controlled business-data exports	Role, reason and auditable download

Clients We Work With page

A new brand-trust page presents approved client or business names, logo marks, sectors or applications, and optional short testimonials or case studies. Client names, logos, quotations and performance claims require written permission and client-supplied approved assets. The existing content administration manages the page; no separate admin view is added.

Reserved for a separate proposal

Search and measurement setup	SEO and AI visibility service
Google Analytics 4 property and ecommerce configuration Google Tag Manager governance Google Search Console verification and monitoring Google Merchant Center onboarding Measurement QA, dashboards and reporting	SEO research and content strategy AEO and GEO strategy Content writing and publishing calendar Search and AI-referral monitoring Ongoing optimization and monthly reporting

Client responsibility. Policies must be supplied or approved by the client and its advisers. MarketiX Studio implements the approved workflow but does not provide legal advice.

07 CUSTOMER PAGE INVENTORY

Fifteen additional customer destinations

These destinations are added to the original sixty-seven customer-facing pages and screens, producing a revised customer count of eighty-two.

New number	Destination	Purpose
68	Support Centre	Guided self-service categories and support entry
69	My Tickets	Ticket list, filters and status
70	Ticket Conversation	Thread, attachments and linked records
71	Return and Exchange Eligibility	Policy and item-level eligibility
72	Return or Refund Case Detail	RMA, pickup, QC and resolution timeline
73	Exchange Selection	Replacement variant and price difference
74	COD Refund Details	Verified refund destination and status
75	Product Comparison	Comparable product and variant attributes
76	GSM and Use Case Finder	Guided product recommendation
77	Product Questions and Answers	Product questions and approved answers
78	Back in Stock Subscriptions	Variant subscriptions and alerts
79	Store Credit	Balance and transaction history
80	Referral Centre	Referral link, eligibility and rewards
81	Privacy Requests	Account export or deletion review
82	Clients We Work With	Approved client brands, sectors and references

08 ADMINISTRATION INVENTORY

Service, after sales and delivery views

The first fifteen additions establish operational ownership for support cases, returns, exchanges, refunds and delivery exceptions.

New number	Administration view	Purpose
45	Service Desk Dashboard	Open volume, SLA, ageing and ownership
46	Ticket Queue	Search, priority, filters and assignment
47	Ticket Detail	Conversation, notes and linked records
48	SLA and Escalation Rules	Response targets and overdue routing
49	Reply Templates	Approved macros and version history
50	Support Analytics	Response, resolution, reopen and satisfaction
51	Return Rules	Eligibility and resolution policy
52	After Sales Queue	Return, exchange, refund and replacement workload
53	Return Case and QC	Evidence, pickup, inspection and disposition
54	Exchange Processing	Replacement and price difference
55	Refund Approval	Approval level and online refund control
56	COD Refund Workflow	Destination, maker-checker and status
57	Store Credit Ledger	Issue, redeem, expire and reverse
58	NDR Queue	Failed delivery cases and deadlines
59	NDR Case	Customer response and courier action history

09 ADMINISTRATION INVENTORY

Trust, discovery, communication and governance views

The remaining fourteen administration additions complete the revised inventory of seventy-three-plus major views. The additional Clients We Work With destination uses the existing content administration.

New number	Administration view	Purpose
60	RTO Risk Rules	Pincode, order, customer and payment controls
61	RTO Analytics	Cost, reason, carrier and recovery reporting
62	Review Moderation	Verified status, media, decision and reply
63	Q&A Moderation	Assignment, answer and publishing
64	Search Synonyms	Approved query language and normalization
65	Search Merchandising	Query, category and campaign rules
66	Search Analytics	Queries, zero results, clicks and conversion
67	Comparison Configuration	Comparable fields and products
68	GSM Finder Rules	Questions, rules and recommendations
69	Notification Templates	Versions, previews and approval
70	Notification Delivery Logs	Provider outcome, retry and replay
71	Operations Exception Queue	Payment, refund, shipment and job failures
72	Privacy Requests	Verification, retention and resolution
73	Session and Device Security	Sessions, revocation and risk events

10 DELIVERY AND ACCEPTANCE

Every expansion module is tested before dependent work proceeds

Each selected module moves through requirements, UX approval, controlled build, integration testing, operational testing and client acceptance before production activation.

Gate	Required output	Acceptance evidence
Rules and states	Workflow, roles, notifications, exceptions and policy dependencies	Written criteria and state diagram
UX approval	Desktop/mobile, errors, empty/loading states and both themes	Approved screens and interaction notes
Controlled build	Customer, admin, service and data workflow	Developer checks and traceable issue list
Integration test	Sandbox payment, shipping and communication behaviour	Success, failure, retry and duplicate-event tests
Operational test	Agent, warehouse, finance and manager scenarios	Role-based test evidence and corrected defects
Client acceptance	Complete agreed module in staging	Client sign-off before production
Launch verification	Production configuration and smoke test	Health checks, sample workflow and rollback readiness

Minimum scenario coverage

Happy path, validation error, permission denial, provider timeout, duplicate webhook, customer retry, partial completion, cancellation, message failure, mobile layout, light mode, dark mode and audit-history verification.

Delivery boundary

Third-party onboarding, API availability and client policy approvals can affect sequencing. A module is accepted against its approved criteria rather than an assumed or undocumented workflow.

11 DELIVERABLES AND DECISIONS

The approved addendum becomes part of the controlled implementation plan

Kleawip may approve all additions or divide them between launch and a later phase. The exact selected modules, dependencies and acceptance criteria will be recorded before development begins.

Deliverables

- Approved workflow and acceptance criteria for every selected module.
 - Responsive customer experiences in established light and dark modes.
 - Role-based administration views with audit history for critical actions.
 - Connected customer, order, payment, shipment, return and support records.
- Provider-aware failure states, retries and operations exception handling.
 - Module-wise functional, responsive, permission and integration testing.
 - Updated administration guide and client handover for added operations.
 - Updated platform inventory of 82 customer screens and 73+ admin views.

Client confirmations

Decision	Confirmation required
Module selection	Approve all additions or identify launch and later phases
Bulk purchase	Quote-only or online bulk checkout, MOQ, quantity tiers, GST and fulfilment terms
Client showcase	Approved client names/logos, written permissions and approved references
Support	Roles, response targets, channels and escalation ownership
After sales	Return windows, exchange, COD refund and store-credit rules
Delivery risk	NDR actions, RTO thresholds and partial-COD restrictions
Retention	Back-in-stock, abandoned-cart, store-credit and referral choices
Approvals	Authorised staff for refunds, write-offs, exports and sensitive actions
